## SUMMARY

---

Python and AI/ML Engineer with experience developing backend services, REST APIs, machine learning applications, data-processing workflows, and AI-powered systems. Skilled in Python, FastAPI, SQL, Scikit-learn, TensorFlow, OpenCV, Next.js, Git, and Docker.

Currently working as an AI/ML Engineer at Meetmux, contributing to AI development, application integration, debugging, and solution delivery. Comfortable working across machine learning, backend development, APIs, and frontend integration. Focused on writing practical, maintainable solutions and understanding both the technical requirements and the people who ultimately use the product.

## EDUCATION

---

### Visvesvaraya Technological University (VTU)

Bachelor of Technology in Artificial Intelligence & Machine Learning

Graduated: 2024

## EXPERIENCE

---

### AI/ML Engineer

Jan 2026 – Present

Meetmux

- Develop AI/ML functionality and Python-based application components for practical product requirements.
- Build backend functionality and integrate machine learning workflows with application services.
- Develop and work with REST APIs using FastAPI for AI inference, application data, and service communication.
- Support integration between frontend applications, backend services, and AI components.
- Work with computer vision and machine learning libraries including OpenCV, TensorFlow, Scikit-learn, and MediaPipe.
- Debug API connectivity, application logic, model inference, and integration issues.
- Test application workflows and improve reliability based on observed behaviour and requirements.
- Use Git and GitHub for version control, code management, and iterative development.

### Machine Learning Intern

Oct 2024 – Mar 2025

Feyn Labs

- Developed Python-based machine learning and data-processing workflows.
- Created preprocessing and feature-engineering pipelines using Pandas and Scikit-learn.
- Implemented clustering, predictive modelling, and NLP-based matching techniques.
- Worked with structured datasets and evaluated machine learning model outputs.
- Contributed to AI prototypes involving time-series, financial, and segmentation use cases.
- Used iterative experimentation to improve model selection and performance.

### AI & Machine Learning Intern

Aug 2023 – Oct 2023

Aerobosoft

- Built Python workflows for data preprocessing, model training, prediction, and evaluation.
- Implemented SVM, Random Forest, and XGBoost classification algorithms.
- Contributed to the development of an NLP chatbot prototype.
- Gained practical experience integrating machine learning logic into software workflows.

## PROJECTS

---

### **AI-Powered Assessment & Proctoring Platform** | Python | FastAPI | REST APIs | Next.js | TypeScript

- Developed backend services for an AI-enabled online assessment and proctoring application.
- Implemented FastAPI endpoints supporting candidate workflows, assessments, adaptive question delivery, proctoring events, and results.
- Integrated frontend application components with Python backend services using REST APIs.
- Developed session and assessment logic for adaptive question delivery.
- Implemented backend handling for proctoring violation events and evidence information.
- Developed risk-scoring functionality for candidate monitoring.
- Integrated computer vision monitoring services with the assessment backend.
- Debugged authentication, routing, API connectivity, frontend/backend synchronization, and application-state issues.
- Configured Cloudflare Tunnel for external application testing.

### **Machine Learning Prediction API** | Python | FastAPI | Uvicorn | Scikit-learn

- Developed REST endpoints for serving trained machine learning models.
- Implemented structured request handling and prediction responses.
- Integrated trained model inference into FastAPI services.
- Tested prediction endpoints locally using API requests.

### **Attendance Register ERP** | Android Studio | Java/Kotlin | Firebase

- Developed an Android attendance-management application.
- Implemented user authentication and role-based access.
- Integrated Firebase for real-time data storage and synchronization.
- Built structured user and attendance-management workflows.

### **AI & Computer Vision Applications** | Python | TensorFlow | OpenCV | MediaPipe

- Developed retinal-image classification using deep learning.
- Built real-time hand gesture recognition using webcam input.
- Integrated computer vision models into working application pipelines.

---

## **TECHNICAL SKILLS**

**Backend Development:** Python, FastAPI, REST APIs, Uvicorn, API Integration, Request Validation

**Programming:** Python, SQL, Java, C, JavaScript, TypeScript

**Frontend:** Next.js, React, Tailwind CSS

**AI & Machine Learning:** Scikit-learn, TensorFlow, Keras, OpenCV, MediaPipe, XGBoost

**Data Processing:** Pandas, NumPy, SQL, Matplotlib, SciPy

**Databases & Services:** Firebase, SQL

**Developer Tools:** Git, GitHub, Docker, VS Code, Jupyter Notebook, Cloudflare Tunnel

**Concepts:** Backend Development, API Design, Authentication, Data Validation, Machine Learning Inference, AI Integration, Debugging, Version Control

---

## **CORE COMPETENCIES**

Python Development • FastAPI • REST APIs • Backend Development • AI Integration • Machine Learning Inference • API Debugging • Data Processing • Git • Full-Stack AI Applications
